

alu profiles

Series of wall / ceiling mounted and false-ceiling recessed aluminum profiles for led strips. It is made of anodized aluminum in various linear forms. It has got special dimensions, in order to house the high output 24V led strip series. It functions as an efficient heat-sink for the high temperature, which is released from the back of the led strip and so the led lifespan is maximized. It can also house various, clear or frosted, polycarbonate covers, of round and other shapes. In this way, it can offer both widespread and anti-glare light effect. It is available in version of one meter.
